

More than 240 Falabella premises in Chile and Peru will be supplied with renewable energy

- *More than 800 GWh per year will power premises operated by Falabella Retail, Sodimac, Tottus, Ikea, Open Plaza and Mall Plaza.*
- *This electricity will be supplied by Enel Generación in Chile, and by Statkraft in Peru.*

June 23, 2021. Falabella took an important step forward in its sustainable development by contracting a fully renewable energy supply for 151 premises in Chile and 93 in Peru.

This binational process continues to advance Falabella's goal of supplying its premises with renewable energy, while achieving greater efficiencies and reducing its energy costs.

These contracts will begin during the first half of 2022 and will supply most of the demand at premises operated by Falabella Retail, Sodimac, Tottus, Ikea, Open Plaza and Mall Plaza. The energy package in Chile was awarded to Enel Generación, and the company selected in Peru was Statkraft.

This is a very important electricity supply contract for 2021 and will result in reducing CO2 emissions by around 261,000 tons per year.

It includes an electro-mobility agreement with Enel X in Chile, which involves setting up and operating charging centers for electric vehicles at stores, malls and distribution centers throughout the country. Customers and logistics operators will then be able to charge their vehicles at Falabella group premises.

Falabella is aware that electricity will be among the principal sources of energy for transport in the future, so it has strengthened its commitment to sustainable development and anticipated the challenges that lie ahead in terms of electro-mobility to the benefit of its business and the convenience of its customers.
